LINING OUT STOCK

Our stock of liners have been produced with the aid of irrigation and we feel that they are very good.

Have you tried Fall Planting? We like to do our own plantings to the field starting the last of September and running through the fall months, the results have been much better than spring plantings.

If the soil is heavy clay, you may have trouble with heaving, so in cases of this kind, it might be necessary to wait for spring.

Early fall planting can be helped by sowing broadcast Summer Oats and cultivating them in. They will grow about 10 to 12 inches high by the time winter kills the tops and this will make good protection to the small plants from the winter winds and will also help keep the ground from heaving so badly. Be sure you use Summer Oats as the Winter variety will be hard to clean up in the spring.

Why not try a fall order? If this is not suitable, let us book you for spring.

Sincerely,

Elton L. Lynch

EXPLANATION OF GRADES: We are listing our liners in grades by the number of years they have been growing under the lath screens; for example, 1 yr. means 1 year in outside beds. 2 yr. would be 2 years outside, etc.
